CGS and TSG enter into long-term, strategic alliance to provide turn-key air pollution control solutions including wet FGD systems to industry

Hauppauge, NY & Pensacola, FL - Clean Gas Systems, Inc. (CGS) and Southern Erectors, Inc.'s Thermal Systems Group (TSG) has formed a long-term joint venture to provide turn-key solutions for industrial air pollution control. Under this agreement, the companies will collaborate in the areas of sales, marketing, design, fabrication, erection and project management providing end-to-end turn-key systems.

"We are very pleased to team-up with SEI Group and TSG", said Anil M. Shah, President of CGS. "By combining our skills and resources into one client focused team, we can provide complete turn-key solutions. This alliance is timely with the BART and MACT deadlines approaching. Many of our clients are currently developing plans to comply with new emissions requirements", he added.

Anthony J. Algiers, General Manager of TSG, said "After an initial contact between Mr. Bill Haren (Southeast Sales Manager of TSG) and Mr. Shah, we quickly saw the benefits of forming an alliance to bring more resources to our clients. This new single team focus allows us to optimize overall system design, eliminate duplication, providing a single source overall Project Management team. CGS has provided the highest quality scrubber systems in the market and TSG's core capabilities include balance-of-plant work. Currently, we are working together on several projects. Both management teams clearly see the power of this partnership. This is a Win-Win for our companies and our clients."

Southern Erector, Inc. (SEI) is a full service design build mechanical contractor. TSG, a division of SEI, was established in 1985 for the engineering and design of paper machine hoods, process air systems and general ventilation systems. TSG, a recognized leader in the Pulp and Paper Industry, has expanded into a wide range of industries and applications over the years, including air pollution control. Southern Erectors Group also owns Southern Environmental, Inc. Since 1988, Southern Environmental has supplied Air Quality Control System (AQCS) equipment, specializing in new and rebuilt, dry and wet Electrostatic Precipitators, including the innovative membrane WESP. Together with CGS' proven technology and product line, SEI is able to offer a complete solution for air pollution control.

Over the last 20 years, CGS has offered its products and services with a commitment to continue to solve industrial air pollution problems. CGS Cyclones and Wet Scrubbers division provides highly efficient systems for a wide variety of applications, worldwide. CGS products include centrifugal/vane, impingement, dynamic wet fan, venturi and multi-venturi scrubbers in addition to complex gas absorption systems. CGS products and systems are designed to achieve the highest performance with on-line reliability, minimum downtime, minimum expenditure and lowest maintenance requirements.
